SUMMARY

Backend software engineer with two years building Go microservices for CDN and distributed cloud infrastructure. Experienced with gRPC, Kubernetes, and event-driven systems on GCP, and focused on reliable services in production.

SKILLS

Languages: Go, JavaScript / TypeScript, Python, Java, Rust

Backend: gRPC, Protocol Buffers, REST APIs, Microservices, Event-driven (Pub/Sub)

Cloud & DevOps: GCP (Pub/Sub, Cloud Storage, BigQuery, Secret Manager, Cloud Build), AWS (S3, SES), Kubernetes, Docker, Prometheus, Grafana, CI/CD

Databases: PostgreSQL, MongoDB, MySQL

Tools: ChromeDP, Playwright, Puppeteer, CDN, Git

EXPERIENCE

N7.io, Associate Engineer II

Jul 2024 – Present

CDN and distributed cloud infrastructure • Rising Star Award

Goregaon, Mumbai

- Build and maintain the Go microservices behind the CDN product, exposed over gRPC with a REST gateway and JWT middleware for validation, authentication, and error handling.
- Implemented Kubernetes monitoring with Prometheus and Grafana, holding pod uptime near 99.9% and resolving resource issues before they reached production.
- Developed browser-automation services with ChromeDP, Playwright, and Puppeteer for page analysis and data extraction, processing over 50,000 requests per day.
- Built event-driven pipelines on GCP Pub/Sub feeding BigQuery for analytics and alerting, with MongoDB backing data access.
- Shipped features for the live CDN dashboard that surface real-time metrics to clients.

Indian Development Foundation (Balgurukul), Software Development Intern

Dec 2022 – Mar 2023

Next.js, Tailwind, MySQL

- Built and deployed a centralized student-data portal used across 300+ Balgurukuls to collect and organize student records.

Second Source, Python Developer Intern

Aug 2022 – Sep 2022

Python, NumPy, Pandas, MySQL

- Developed Python algorithms to analyze stock data from yfinance, identifying demand and supply zones and recurring trading patterns.

PROJECTS

Sajni, full-stack AI app

Go • React • PostgreSQL

- Full-stack application, live at ohmysajni.com. Go backend integrating Google's Gemini models with PostgreSQL, OAuth, WebSockets, and Cloud Tasks, alongside a React and TypeScript front end built around a Tiptap editor. github.com/snehilshah/sajni-api • [sajni-web](https://sajni-web.com).

Hyperspectral Image Classification with Few-Shot Learning

Jun 2023 – Mar 2024

Research Intern, IIT Bombay • Python, TensorFlow

- Evaluated a few-shot learning framework on benchmark hyperspectral-image datasets, demonstrating improved classification accuracy over the baseline.

EDUCATION

B.E. Computer Engineering (Honours in AI & ML), University of Mumbai

2024

CGPA: 8.90 / 10

LEADERSHIP • OPEN SOURCE • CERTIFICATIONS

- **Projects Team Lead, Research Cell (2022–2024).** Led a 16-member team that delivered six client projects.
- **Neovim (Lua).** Maintain personal forks of the Go-focused plugins [no-go.nvim](https://github.com/snehilshah/no-go.nvim) and [comfy-line-numbers.nvim](https://github.com/snehilshah/comfy-line-numbers.nvim).
- **Silver Elite Certificate in Java, NPTEL (IIT Kharagpur)** ([verify](https://verify.nptel.ac.in)) • **Google Hash Code 2022** participant
